

CRISTHIAN RICHARD

Fullstack AI Developer (Senior) | Angular · Lit.js · Python · GCP

Argentina, Remote | +54 3442 689884 | richardcristhian94@gmail.com | [linkedin.com/in/cristhian-richard-bb9060174](https://www.linkedin.com/in/cristhian-richard-bb9060174) | cristhian-richard.com | github.com/CristhianRichard94

PROFESSIONAL SUMMARY

Fullstack Developer with 6+ years of experience building production web applications with Angular and Lit.js, backed by Python and Node.js APIs on GCP, plus React and Next.js experience through personal projects. Contributed to ~15 projects at Media.Monks across cross-functional, English-speaking teams of 1 to 12, including AI-powered metadata pipelines for 20,000+ websites and a RAG system built for AI-driven marketing copy generation. Comfortable owning projects end to end, from architecture to deployment.

PROFESSIONAL EXPERIENCE

Freelance Software Engineer

Jun 2025 – May 2026

- Built **Caseritas**, a Next.js cloud-native management app for a wholesale rotisserie client: automated inventory tracking, order workflows, and role-based profiles (admin, sales, kitchen), reducing manual, repetitive operational tasks.
- Designed and deployed AI-powered automation workflows (Make) for small businesses, including automated social media content generation and intelligent email response systems.
- Developed high-converting landing pages for small businesses using modern frontend technologies, supporting digital presence and customer acquisition.

Media.Monks

Jan 2021 – Jun 2025 · 4 yrs 6 mos · Remote

Fullstack AI Developer

Apr 2025 – Jun 2025 · 3 mos (title formalized; AI work began mid-2024)

- Engineered AI-powered metadata generation pipelines for over 20,000 websites using Vertex AI on GCP, producing enriched metadata to improve content discoverability and SEO accuracy.
- Iterated on an AI-powered marketing copy generation solution: started by generating copy directly with a fine-tuned Gemini model, by myself, evolved it into a version-controlled workflow for managing instructions, documents, and prompts through Gemini Gems, and ultimately built a RAG system using GCP technologies to ground copy generation in reference documents.

Senior Frontend Developer

May 2023 – Apr 2025 · 2 yrs

- Promoted to Senior after leading full-lifecycle development of complex Angular applications, including a dynamic marketing site builder used by a Fortune 500 marketing team.
- Built a Scorecard Lit.js internal-use app responsible for displaying dynamic, interactive tables with site scores.
- Delivered Lit.js and Python-based live events and game experiences as part of marketing campaigns.
- Contributed to building a multi-tenant AI campaign management platform using Vue.js and Nest.js.
- Created and deployed GCP Cloud Functions and App Engine services, managing versioning and IAM permissions.
- Took on backend ownership across Python services, expanding beyond the original frontend scope of the role.

Frontend Developer

Jan 2021 – May 2023 · 2 yrs 5 mos

- Built and evolved a complex Angular and Python-driven CMS site builder used internally by a Fortune 500 marketing team.
- Implemented server-side rendering for the site builder using Angular Universal with a minimalist approach: stripped unused CSS (keeping only visible-component styles) and unused JS from the bundle, and added lightweight client scripts scoped to each component's exact needs (e.g., binding scroll listeners for a carousel), significantly cutting bundle size and page load time.

Sidesys IT Solutions

Jun 2019 – Jan 2021 · 1 yr 8 mos

Frontend Developer

- Built features on an Angular-based Cashier Application connected to a large-scale queue management .NET Framework system, streamlining customer queues and improving branch efficiency.
- Modernized legacy Web Forms applications by integrating reusable Vue.js Web Components, improving modularity and maintainability.
- Developed a multi-step survey application and an appointment management frontend using Angular, integrating with a .NET Framework backend via OpenAPI to improve client scheduling efficiency.

PERSONAL PROJECTS

- **Multi-agent Claude Code workflow** — custom setup with specialized agents (software-engineer, QA, security, UX, UI) orchestrated via SubagentStop hooks; used across recent freelance and personal projects.
- **AI Engineer Path** — MCP servers, RAG doc bot (Flask, Next.js, Celery, Qdrant), voice assistant pipeline (STT/GPT/TTS).
- **Spacetrup** — React 18, Vite, React Three Fiber, GSAP. Interactive 3D portfolio.

EDUCATION

Universidad Tecnológica Nacional (UTN)

Information Systems Engineer · Concepción del Uruguay, Argentina · 2014 – 2019

CERTIFICATIONS

C1 English Proficiency (IELTS, Feb 2025) · Claude Code, MCP, Agentic AI, and Generative AI for Software Development (Jun 2026) · Retrieval Augmented Generation (RAG) (Jul 2026) — *DeepLearning.AI*

TECHNICAL SKILLS

Frontend / Backend: Angular, Lit.js, React, Next.js, Vue.js, TypeScript · Python, Node.js, .NET Framework, RESTful APIs, Flask

Cloud & DevOps: GCP (Cloud Functions, Vertex AI), AWS, Docker, CI/CD, Microservices

AI & ML: LLM Integration, RAG, Agentic AI, MCP, Prompt Engineering, Fine-tuning, Vector DBs
