PROFESSIONAL SUMMARY

Results-driven Senior Fullstack AI Engineer with 6+ years of experience architecting and shipping scalable, high-performance web applications and AI-powered solutions on GCP. Specialized in building seamless user interfaces (Angular, React) backed by robust APIs and serverless microservices—combining end-to-end fullstack development with hands-on AI/ML integration and CI/CD optimization.

PROFESSIONAL EXPERIENCE

Freelance & Independent Projects

Jun. 2025 – Present

Independent Software Engineer

- Built a cloud-native stock management application, automating inventory tracking and order workflows to reduce stock errors and eliminate repetitive manual tasks, saving 60% of operational time.
- Designed and deployed AI-powered automation workflows (Make) for small businesses — including automated social media posting from news sources and intelligent email response systems — streamlining daily operations.
- Developed high-converting landing pages for small businesses (e.g., bakeries, local services), enabling digital presence and customer acquisition through modern frontend technologies.

Media.Monks

Jan. 2021 – May 2025 | Remote

Senior Fullstack AI Developer

- Engineered and deployed AI-powered metadata enrichment solutions across 20,000+ websites, driving a 30% uplift in discoverability and SEO accuracy.
- Architected scalable microservices and serverless infrastructure (Cloud Functions, App Engine) on GCP using Vertex AI, designing robust RESTful APIs that reduced system latency and improved operational efficiency.
- Spearheaded full-lifecycle development of a dynamic Angular marketing site builder and contributed to a large-scale React AI-powered campaign management platform, focusing on performance optimization and component reusability.
- Managed end-to-end AI model lifecycle, speeding up to 30% content production process and ensuring reliable model performance at scale.
- Streamlined CI/CD pipelines, achieving a 40% reduction in deployment time.

Sidesys IT Solutions

Jun 2019 – Jan. 2021

Frontend Developer

- Built and deployed core RESTful services (.NET Framework) powering a large-scale bank queue management system, reducing average customer wait times through an Angular-based Cashier Application.
- Developed a full-featured appointment scheduling frontend with Vue.js, integrating seamlessly with a .NET backend via OpenAPI to enhance client scheduling efficiency.
- Collaborated directly with clients to gather requirements and iterate on features across multiple web application projects using Agile/Scrum methodology.

EDUCATION

Universidad Tecnológica Nacional (UTN)

Jun. 2019 | C. del Uruguay, Argentina

Information Systems Engineer

Awarded Data Scientist Student Scholarship; participated in the Data Scientist Research Group (Mar. 2018 – Oct. 2020), contributing to academic research in machine learning and data science.

CERTIFICATIONS

C1 English Proficiency - General Training, IELTS

Feb 2025 - Feb 2027

TECHNICAL SKILLS

Frontend: Angular, React, Vue.js, Next.js

Backend: Python, Node.js., .NET Framework, RESTful APIs, OpenAPI

Cloud & DevOps: Google Cloud Platform (GCP), Cloud Functions, App Engine, Serverless Architecture, CI/CD

AI & Machine Learning: Vertex AI, AI/ML Model Development, AI Coding Assistants, R.A.G, Agentic Development

Methodologies: Agile/Scrum, Microservices Architecture
